

## Access.Gate

### About

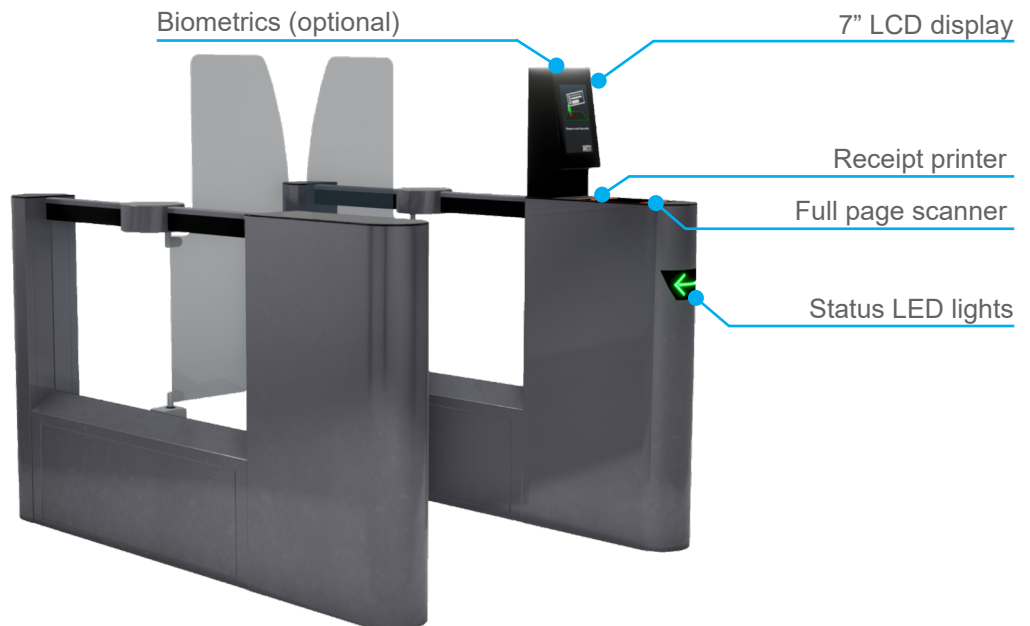

The Access.Gate provides passengers and staff with reliable, fast and convenient access to secure areas at the airport, combining fully automated and manual access checkpoints.

When passengers pass from landside to airside, the software checks their boarding passes and verifies the information by comparing it with the airport's database. If required, the solution can also be equipped with a biometric identification solution. Our system provides passenger tracking and other information including statistics, peak times or the location of passengers.

For the convenience of passengers, the application also displays the walking time to their gate or any gate changes. The Access.Gate can be used as pre-security check or lounge access.

### Main features:

- Full page boarding pass scanner
- Advanced passenger tracking
- Biometrics (optional)
- UPS (optional)
- Touchscreen (optional)

### Your benefits:

- ✓ Two possible uses (pre-sec. & lounge access)
- ✓ Effortless integration / easy to maintain
- ✓ Combines fully automated & manual access checkpoints
- ✓ Provides useful statistics, peak times, passenger location
- ✓ Quick PAX processing time
